Notes

NOTESPLANNING

Before starting the installation, plan the layout in detail, taking the site conditions into consideration.

TARGET READERSHIP AND QUALIFICATIONS

All work associated with the installation and water connection may only be undertaken by a plumber and all work associated with the electrical installation may only be undertaken by a licensed electrician.

SAFETY INSTRUCTIONS

Incorrect handling/transport may result in product damage.

The metal frame and whirl system are not resilient.

- > Never hold by the metal frame or whirl system.

Improper transport can cause damage to the product and/or property damage, e.g. leaks.

- > Wear appropriate protective clothing.
- > Avoid knocks.

Risk of product and/or property damage!

The breach of local and country-specific regulations and standards can cause damage to the product and/or property damage.

- > Observe the local installation regulations and any country-specific standards at all times.

Duravit AG assumes no liability for the consequences of improper handling or improper transport.

Pre-installation

Pre-installation

INSTALLATION LOCATION / INSTALLATION ROOM

> Make sure that the installation location fulfils the following criteria

Doors / external access	<ul style="list-style-type: none"> Ensure that doors or other access openings are large enough to accommodate transport dimensions, keeping in mind the weight and need for sufficient manoeuvring room.
Required area	<ul style="list-style-type: none"> Allow for enough space around the tub for the installation.
Floor	<ul style="list-style-type: none"> Completely level. At a right angle to the wall. Note the overall strength of the floor structure including the floor finish. There must not be any underfloor heating under the tub. Install tubs after the tiles. (Top edge of finished floor). Depending on the combination of tub and whirl system it is possible that system components may protrude beyond the edge of the tub. We therefore recommend installation in a support frame. Tolerances for acrylic: As a result of the manufacturing process, deviations from the nominal dimensions may occur within the limits specified in the DIN 198 standard. Please take this into account in your planning.
Wall	<ul style="list-style-type: none"> Tiled. At a right angle to the tub. Completely straight. Note the overall strength of the wall structure including the wall finish.

WATER INSTALLATION

Water connection

- Connections for the water supply and drains must be in compliance with the currently valid standards and public regulations.
- Position the water drain (DN 50) flush to the mounting surface or out of the wall directly above the mounting surface; see drawing for recommended area.

MAINTENANCE OPENINGS AND AIR SUPPLY

- The air supply for the whirl system (ventilation grille/ventilation slot) must not be covered.

ELECTRICAL INSTALLATION

DANGER

Risk of fatal electric shock

- > Disconnect the power supply while working on the electrical components.
- > The device must be earthed. Earthed appliances must be permanently connected to fixed wiring.
- > Connect the device only to the designated electrical cable.
- > NEVER touch the power supply line with wet hands.

Pre-installation

- > Lay a permanent power supply line which must be on a separate circuit.
 - The device itself does not have electrical leakage protection function. The device must be supplied through a residual current device (RCD) with a rated residual operating current not exceeding 30 mA.
 - Means for disconnection must be incorporated in the fixed wiring in accordance with the wiring rules and have a contact separation in all poles that provides full disconnection under overvoltage category III conditions outside the prescribed protection zones (0 – 2).
 - Leave 3000 mm of the supply line exposed.
- > Lay an equipotential bonding cable:
 - Leave 3000 mm of cable exposed.
- > Select a supply line cross-section based on the connected load on the identification plate (2.5 mm – 4 mm).
- > Confirm that the grounding wire is 10 mm (3/8") longer than the L and N wire.
- > Install a circuit breaker.

Protection zones

* Or the height of the highest fixed-location shower head/water outlet, whichever is higher.

Electrical data

Whirl system	Rated power with standard equipment	Max. rated power, fully-equipped
Air System (DuraSolid) (# 760XXX XX X AS 00XX)	0.58 kW	0.58 kW

Power supply

76XXXX XX X XX XXX0: 220 – 240 V AC, 50 Hz
76XXXX XX X XX XXX6: 220 – 240 V AC, 60 Hz

Fuse $I_N = 16 \text{ A}$

RCD $I_{\Delta N} \leq 30 \text{ mA}$

Maintenance openings

Maintenance

Install the whirltub in such a way that all of the important equipment (pump, blower and control system) remains accessible. It is recommended to install the tub with a removable furniture panel for easy maintenance.

#760462, #760463

Location of the whirl system components

The illustrations show the standard configuration for the components of the whirl system* with the location of the operating unit. The back massage is located at the head end (depending on the whirl system).

Custom-made designs available on request. In such cases we will require a drawing showing the desired layout. Duravit will confirm whether the desired layout can be implemented.
